

IN THE SPECIFICATION

**Amendments to the Specification:**

Please replace the paragraph 0016, with the following rewritten paragraph:

[0016] Furthermore, a projection method of the DLP projection system disclosed by the invention includes the steps of: guiding the light beams output from the illuminating device into the prism set, and having the light beams pass through the prism set without being reflected to the optical-path-switching element; reflecting the light beam reaching the optical-path-switching element under a first state back to the prism set, and having the light beams enter the projection device after being totally reflected; and reflecting the light beams reaching the optical-path-switching element under a second state back to the prism set, and having the light beam be totally reflected at a interface between the first-encountered air gap and one of the prisms next to the first-encountered air gap and then be totally internal reflected back and forth in the prism.
